## The yelomöd advantage

Our yelomöd shirts and hats use advanced fluorescent materials to amplify the sun's healthy yellow rays and deliver them to your skin.

## How does yelomöd work?

The yelomöd material has a dual effect:

1. Fluorescent compounds in the yelomöd material convert the sun's harmful UV radiation into healthy yellow light.
2. The material's unique polymer matrix allows for selective transmission to the skin of the sun's naturally occurring yellow and infrared light.

## Wearing yelomöd

- Protect yourself from the sun. Ensure areas exposed to sunlight are protected with yelomöd garments offering a UPF of 50+.
- For hats, remember to use sunscreen lotion on areas not protected by the brim of the hat, including the neck.
- yelomöd's fluorescent properties diminish after 30 washes or one season of use.

## yelomöd light transmission -from yelomöd to the skin

yelomöd transmits up to 8mW/cm<sup>2</sup> of yellow light from the sun to your skin.

Areas of the body not protected from the sun's UV rays by yelomöd shirts or hats must be covered or protected with sunscreen lotion.

yelomöd material offers a unique fluorescent technology that delivers the sun's safe, healthy yellow rays to the skin.

yelomöd blocks harmful UV rays with its special dense knit of polymer fibres. UPF 50+
